Tony,

This is a copy of the report I gave to
Lynn, as far as we are concerned it should
have been ~~closed~~ closed out. Call me if
you need more info.

RE: Information on Hot Springs Sand and Gravel Operation in Box Elder County

Dear Mr. Kunzler,

I have collected the information that you have requested from our October 24, 1997 meeting to discuss the appropriateness of a mining permit for our hot springs gravel pit. The gravel pit was purchased in July of 1964 as a gravel reserve for the I-15 project as well as for future use.

I was unable to come up with specific amounts of material hauled from the site due to the age of the pit and the type of material that was hauled from the pit. Historically we hauled pit run from the pit for the I-15 job and other jobs in the area. More recently we have hauled pit run and rocks upon demand from our customers. These loads have not been weighed and therefore we have no record to the amount of material extracted.

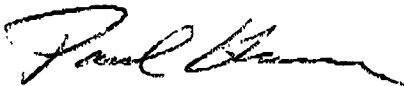

As you will notice when you visit the pit there is a great amount of large rocks in the overburden at this location. The overburden has been stripped and the rocks have been exposed. These rocks will be removed as needed until we can get to the underlying material at which time it will be utilized as pit run, crushed aggregates, or whatever the market dictates.

We conducted a geological investigation of the site to determine the origin and make up of the material. It was determined to be a beach deposit of sand and gravel derived from the deposition of alluvial sediment into the Pleistocene lakes of the Bonnaville system. See the attached letter and geological maps.

We still feel that based on this review of the site, this gravel pit meets the definition of sand, gravel and rock aggregate as written in your proposed rules, and should therefore be exempt from permitting by your division. We would however, like to schedule a time for you to come out and observe the site for yourself to determine if it fits within your definition of a sand and gravel operation.

Please call me and we can schedule a time to meet at the site and discuss this issue further. I can be contacted at (801) 732-4070

Sincerely,

Paul Glauser

Dear Paul,

The Warm Springs gravel pit located in Section 14, Range 2 West, Township 7 North, is a beach deposit of sand and gravel derived from the deposition of alluvial sediment into the Pleistocene lakes of the Bonnaville system. According to the enclosed geologic map, this deposit is mapped as Provo Formation and younger shore facies. These beach deposits are very common along the Wasatch Front and makes up for the majority of the present sand and gravel pits.

This particular deposit consists of a wide range in sizing of quartzite aggregate eroded from the Tintic Formation. Judging from the rounding of the edges and corners on some of the larger aggregate suggests that this deposit has endured a lot of weathering.

If you need further information on this deposit, please give me a call,

Douglas C. Bedingfield
